More than 70 years of combined surgical experience

Dr Wong, Dr Tang and Dr Leong have close to 70 years of combined surgical experience in both general and vascular surgery. The doctors are dual-accredited having completed specialist surgical training under the Certificate of Completion of Training (CCT) program in the UK and are registered with the Singapore Medical Council (SMC) and General Medical Council (GMC).

Up-to-date evidence-based patient management

Our specialists practise up-to-date, evidence-based surgery. Delivering excellence in patient care with the most advanced treatments is a driving force of their clinical practice. Together they have written more than 300 publications on the various treatment options for vascular and endovascular surgery.

High priority in patient education and knowledge

Our team believes that all patients should have all the necessary information about their vascular condition to make an informed choice about their treatment. Listening and being honest with patients are important values which have helped foster unique and dynamic patient-doctor relationships over the years.
